

## At a glance

- Interactive dashboard to visualise multiple cost-of-living data metrics at a glance
- Ability to focus on specific locations and to analyse data at data zone level
- Tailored to meet exact requirements

## What this dashboard is used for

- Smart Data Foundry cost of living dashboards join together financial well-being indicators with contextual information to help local authorities understand the difficulties faced by their citizens in the current cost of living crisis.
- Local authorities can use the dashboards to deploy targeted support based on identified local needs, contexts and circumstances.

## Key features and benefits

### Features

- Intuitive design: co-created and piloted with East Renfrewshire Council
- Indicators derived from de-identified current account data available at postcode level and contextual information
- Data displayed at data zone level
- Ability to expand use cases and functionality by integrating public or Government owned data sets

### Benefits

- Real world financial data from NatWest Group - 1.2m de-identified records
- Enables specific council intervention and targeted support
- Data that spans multiple years to allow for a year-on-year comparison for key metrics
- Quarterly data updates to keep insights up to date and relevant

## Core data attributes

Name	Source
